Advanced Union-Find

The Ackermann Function

Tarjan's Bound

Theorem: [Tarjan 75] With Union by Rank and path compression, m UNION+FIND operations take $O(m\alpha(n))$ time, where $\alpha(n)$ is the inverse Ackerman function (will define in this video)

Proof in next video.

The Ackermann Function

Aside: Many different definitions, all more or less equivalent.

Will define $A_k(r)$ for all integers k and $r \geq 1$. (recursively)

Base case: $A_0(r) = r + 1$ for all $r \geq 1$.

In general: For $k, r \geq 1$:

$$\begin{aligned} A_k(r) &= \text{Apply } A_{k-1} \text{ } r \text{ times to } r \\ &= (A_{k-1} \circ A_{k-1} \circ \dots \circ A_{k-1})(r) \end{aligned}$$

r -fold composition

Quiz: A_1

Quiz: $A_1(r)$ corresponds to what function of r ?

- A) Successor ($r \mapsto r + 1$)
- B) Doubling ($r \mapsto 2r$)
- C) Exponentiation ($r \mapsto 2^r$)
- D) Tower function ($r \mapsto 2^{2^{\dots r \text{ times } \dots^2}}$)

$$A_1(r) = (A_0 \circ A_0 \circ \dots \circ A_0)(r) = 2r$$

(r -fold composition, add 1 each time)

Quiz: A_2

Quiz: What function does $A_2(r)$ correspond to?

A) $r \mapsto 4r$

B) $r \mapsto 2^r$

B) $r \mapsto r2^r$

D) $r \mapsto 2^{2 \dots r \text{ times} \dots 2}$

$A_2(r) = (A_1 \circ A_1 \circ \dots \circ A_1)(r) = r2^r$
(r -fold composition, doubles each time)

Quiz: A_3

Quiz: What is $A_3(2)$? Recall $A_2(r) = r2^r$

- A) 8
- B) 1024
- B) 2048
- D) Bigger than 2048

$$A_3(2) = A_2(A_2(2)) = A_2(8) = 82^8 = 2^{11} = 2048$$

In general: $A_3(r) = (A_2 \circ A_2 \circ \dots (r \text{ times}) \dots \circ A_2)(r) \geq$ a tower of r 2's $= 2^{2^{\dots r \text{ times} \dots 2}}$

$$A_4$$

$$A_4(2) = A_3(A_3(2)) = A_3(2048) \geq 2^{2^{\dots \text{height } 2048} \dots^2}$$

In general: $A_4(r) = (A_3 \circ \dots \text{ } r \text{ times } \dots \circ A_3)(r) \approx$ iterated tower function (aka “wowzer” function)

The Inverse Ackermann Function

Definition: For every $n \geq 4$, $\alpha(n)$ = minimum value of k such that $A_k(2) \geq n$.

$$\alpha(n) = 1, n = 4 \quad (A_1(2) = 4)$$

$$\alpha(n) = 2, n = 5, \dots, 8 \quad (A_2(2) = 8)$$

$$\alpha(n) = 3, n = 9, 10, \dots, 2048$$

$$\alpha(n) = 4, n \text{ up to roughly a tower}$$

of 2's of height 2048

$$\alpha(n) = 5 \text{ for } n \text{ up to ???}$$

$$\log^* n = 1, n = \underline{2}$$

$$\log^* n = 2, n = 3, \underline{4}$$

$$\log^* n = 3, n = 5, \dots, \underline{16}$$

$$\log^* n = 4, n = 17, \underline{65536}$$

$$\log^* n = 5, n = 65537, \underline{2^{65536}}$$

$$\log^* n = 2048 \text{ for such } n$$
